Gas Leak LP Chart

1. Identify proximity of leak
2. Turn off valve on tank
3. Inspect hose and regulator for cuts or kinks
4. Check connection between plastic fitting and tank valve for cross threading

- Regulator malfunction due to low heat and pressure
  - Remove and replace regulator
  - Perform bubble test
  - If problem persists, contact a Bull Authorized Service Center or qualified technician

- Source is coming from valve or front of unit
  - Check connection between rubberized hose union and stainless steel flex line
  - If loose then tighten and turn on valve on the tank. Be careful not to damage the stainless steel flexline.
  - Perform bubble test
  - If problem persists, contact a Bull Authorized Service Center or qualified technician

- Contact a Bull Authorized Service Center or qualified technician
