Main Burner Ignition Chart

1. Disconnect or shut-off gas supply

2. Remove grates and flame tamer to expose burner. Remove burner and check ports for clogs, obstruction or debris. Ensure that each port is clean.

3. Remove screws from sides of control panel and drop the panel to expose the valves and electrode.

4. Clean around the electrodes contact point with a scouring pad or small wire brush.

5. Inspect the valve orifice, clean orifice stem with a pipe cleaner to remove any spider webs, grease or sauce.

6. Check for a spark by clicking the valve.

7. Put the control panel back in place, turn on gas supply and try to ignite burners.

8. If problem persists, contact a Bull Authorized Service Center or qualified technician.
